The indicated rates of return are the historical annual compounded total returns, including changes in unit/share value and reinvestment of all distributions, and do not take into account sales, redemption, distribution or optional charges, or income taxes payable by any securityholder that would have reduced returns. Additionally, index returns do not take into account management, operating, or trading expenses. The rates of return above are not indicative of future returns. Investment funds are not guaranteed, their values change frequently, and past performance may not be repeated. The indices are not directly investible. Only the returns for periods of one year or greater are annualized returns.

DEFINITIONS

Annualized Distribution Yield: The most recent regular distribution (excluding additional year end distributions) annualized for frequency, divided by current NAV.

Management Expense Ratio: Management expense ratio ("MER") is based on total expenses, including sales tax, (excluding commissions and other portfolio transaction costs) for the stated period for each ETF and is expressed as an annualized percentage of each ETF's daily average net asset value during the period. Out of its management fees, the Manager pays for such services to the ETF as investment manager compensation, service fees and marketing.

Net Assets: The value of all assets, less the value of all liabilities, at a particular point in time. (Includes all classes of this ETF.)

Risk Rating: Risk Rating is based on how much the ETF's returns have changed from year to year. It doesn't tell you how volatile the ETF will be in the future. The rating can change overtime. An ETF with a low risk rating can still lose money.

12-Month Trailing Yield: The yield an investor would have received if they had held the ETF over the last twelve months stated as a percentage of the net asset value per unit on the last business day of the most recent month-end.

Weighted Average Duration: Weighted Average Duration is the average duration of the underlying bonds in the portfolio or an index, as applicable, weighted by the relative size of each bond in that portfolio or index. Duration is a measure of the responsiveness of a bond's price to changes in interest rates and the Weighted Average Duration of a portfolio or Index, as applicable, is a measure of the responsiveness of that portfolio or index to changes in interest rates. Bond prices generally move inversely to interest rates.

Weighted Average Coupon: Weighted Average coupon refers to the average coupon rate of the underlying bonds in the portfolio or index, as applicable, weighted by the relative size of each bond in that portfolio or index.

Weighted Average Yield to Maturity: The yield to maturity of a bond is stated as an interest rate and represents the present value of a bond's future coupon payment plus the difference between the bond's current market price and its par value receivable at maturity. The yield to maturity considers not only the coupon income but any capital gain or loss that the investor will realize by holding the bond to maturity. It also considers the reinvestment of the coupons. The Weighted Average Yield to Maturity is the average yield to maturity of each of the underlying bonds in the portfolio or index (as applicable) weighted by the relative size of each bond in that portfolio or index.
