

REASONS TO CONSIDER

Efficient Exposure to Crude Oil

HUC’s unique methodology is designed to provide the best possible exposure to crude oil, by providing exposure to the Index in the winter months (December) contract of each year, which is often the most liquid, to eliminate the negative roll yield from monthly futures contracts.

Risk Management

Investing in crude oil-focused companies exposes investors to external factors such as corporate/labour instability, unpredictable governments in oil-producing countries and interest rates, among other factors. By gaining exposure to the Solactive Light Sweet Crude Oil Winter MD Rolling Futures Index ER, HUC offers exposure to the price of crude oil without the accompanying equity risk.

Hedging Currency Risk

HUC is denominated in Canadian dollars, and any gains or losses resulting from its investment in U.S. dollar-denominated assets are hedged back to the Canadian dollar, reducing currency risk for Canadian investors while providing exposure to crude oil futures.

INVESTMENT OBJECTIVE

HUC seeks investment results, before fees, expenses, distributions, brokerage commissions and other transaction costs, that endeavour to correspond to the performance of the Solactive Light Sweet Crude Oil Winter MD Rolling Futures Index ER. HUC is denominated in Canadian dollars. Any U.S. dollar gains or losses as a result of the ETF’s investment will be hedged back to the Canadian dollar to the best of the ETF’s ability.

ETF Category: Corporate Class,  
Commodities

Fund performance as at Jun. 30, 2025

The indicated rates of return are the historical annual compounded total returns, including changes in unit/share value and reinvestment of all distributions, and do not take into account sales, redemption, distribution or optional charges, or income taxes payable by any securityholder that would have reduced returns. Additionally, index returns do not take into account management, operating, or trading expenses. The rates of return above are not indicative of future returns. Investment funds are not guaranteed, their values change frequently, and past performance may not be repeated. The indices are not directly investible. Only the returns for periods of one year or greater are annualized returns.

## DEFINITIONS

**Annualized Distribution Yield:** The most recent regular distribution (excluding additional year end distributions) annualized for frequency, divided by current NAV.

**Management Expense Ratio:** Management expense ratio ("MER") is based on total expenses, including sales tax, (excluding commissions and other portfolio transaction costs) for the stated period for each ETF and is expressed as an annualized percentage of each ETF's daily average net asset value during the period. Out of its management fees, the Manager pays for such services to the ETF as investment manager compensation, service fees and marketing.

**Net Assets:** The value of all assets, less the value of all liabilities, at a particular point in time. (Includes all classes of this ETF.)

**Risk Rating:** Risk Rating is based on how much the ETF's returns have changed from year to year. It doesn't tell you how volatile the ETF will be in the future. The rating can change overtime. An ETF with a low risk rating can still lose money.

**12-Month Trailing Yield:** The yield an investor would have received if they had held the ETF over the last twelve months stated as a percentage of the net asset value per unit on the last business day of the most recent month-end.
